Marines Under Armor Sep 29 2020 In this story of men, machines and missions, Kenneth Estes tells how the U.S. Marine Corps came to acquire the armored fighting vehicle and what it tried to do with it. The longtime Marine tank officer and noted military historian offers an insider's view of the Corps's acquisition and use of armored fighting vehicles over the course of several generations, a view that illustrates the characteristics of the Corps as a military institution and of the men who have guided its development. His book examines the planning, acquisition, and employment of tanks, amphibian tractors, and armored cars and explores the ideas that led to the fielding of these weapons systems along with the doctrines and tactics intended for them, and their actual use in combat.

Drawing on archival resources previously untouched by researchers and interviews of both past and serving crewmen, Estes presents a unique and unheralded story that is filled with new information and analysis of the armored vehicles, their leaders, and the men who drove these steel chariots into battle. Such authoritative detail and documentation of the decisions to acquire, develop, and organize armored units in the U.S. Marine Corps assures the book's acknowledgement as a definitive reference.

American Tanks & AFVs of World War II Oct 11 2021 The entry of the US into World War II provided the Allies with the industrial might to finally take the war to German and Japanese forces across the world. Central to this was the focus of the American military industrial complex on the manufacture of tanks and armoured fighting vehicles. Between 1939 and 1945, 88,140 tanks and 18,620 other armored vehicles were built – almost twice the number that Germany and Great Britain combined were able to supply. In this lavishly illustrated volume, armour expert Michael Green examines the dizzying array of machinery fielded by the US Army, from the famed M4 Sherman, M3 Stuart and M3 Lee through to the half-tracks, armored cars, self-propelled artillery, tank destroyers, armored recovery vehicles and tracked landing vehicles that provided the armoured fist that the Allies needed to break Axis resistance in Europe and the Pacific. Publishing in paperback for the first time and packed with historical and contemporary colour photography, this encyclopedic new study details the design, development, and construction of these vehicles, their deployment in battle and the impact that they had on the outcome of the war.

Tank Attack at Monte Cassino Oct 31 2020 Early morning, 19 March 1944. Tanks manned by New Zealanders, Indians and Americans launch a daring attack along a narrow mountain track on German positions north of Monte Cassino. So began one of the most audacious Allied attempts to break through the Gustav Line and advance on Rome – and it almost succeeded. Yet the extraordinary story has seldom been told, and it has never been told before in the vivid detail Jeffrey Plowman brings to this new account. Using operational orders, combat reports, unit diaries, post-battle photos from private and public archives and the graphic personal accounts of those who took part, he describes the construction of Cavendish Road and the course of the entire operation that followed. The planning for the attack and the men involved are described in a gripping and clear-sighted way, as is the attack itself – its initial rapid

success and its ultimate failure. Eighty years later Jeffrey Plowman reveals exactly what happened and shows how and why this bold thrust against the German strongpoints at Monte Cassino, which could have turned the course of the battle, ended in retreat. His book also features a visitor's guide that covers the length of Cavendish Road from the village of Cairra to Massa Albaneta, linking each spot with the events described in the narrative.

British Tanks: The Second World War Jun 07 2021 Perhaps the British did not produce the most successful tanks of the Second World War, but they certainly designed an extraordinary range of light, medium and heavy tanks along with many that were adapted for special purposes. This fascinating variety of military machinery is recorded in Pat Wares photographic history. Using a selection of wartime photographs—supported by some modern photographs of preserved vehicles the book describes the origins of the tank in Britain during the First World War, looks at British tank development during the inter-war period and contrasts this with advances made elsewhere—in Germany, France, the USA and the Soviet Union. All of the British tanks that saw service during the Second World War are described, among them the cruisers (Crusader, Cromwell, Comet), the infantry tanks (Matilda, Valentine, Churchill) and the US imports (Stuart, Lee/Grant, Sherman). Finally, an extensive section is devoted to the so-called 'funnies'—the tanks developed for crucial tasks like bridge-laying, mine-clearing, flame-throwing and amphibious operation. Pat Wares photographic survey of these tanks at war is an expert introduction to a key period in the history of British fighting vehicles.
