For all her wisdom as a teacher, Cyndi Lee understood intuitively that she still had a lot to learn. In spite of her success in physically demanding professions - dancer, choreographer, and yoga teacher - Lee was caught in a lifelong cycle of repetitive self-judgment about her body. Instead of the radical contentment expected in international yoga teachers, she realised that hating her body was a form of suffering,

which was infecting her closest relationships - including her relationship to herself. Inspired by the honesty and vulnerability of her students, Lee embarked on a journey of self-discovery that led her outward - from the sacred sites of the parched Indian countryside to the center of the 2011 earthquake in Japan - and inward, to seek the counsel of wise women, friends and strangers both. Applying the ancient Buddhist practice of loving-kindness meditation to herself, Lee learned that compassion is the only antidote to hatred, thereby healing her heart and changing her

mind. With prose as agile as the yoga sequences she creates, *May I Be Happy* gives voice to Lee's belief that every life arises, abides, and ultimately dissolves. By becoming her own best student, Lee internalizes the strength, stability, and clarity she imparts in her Buddhist-inspired yoga classes. An invaluable source of information on the practice of total intravenous anesthesia (TIVA) with or without target-controlled infusion (TCI) technology. An Overview of TCI and TIVA was written by two of the leading lights in anesthetic pharmacology. It is an invaluable

and physiology is essential for veterinary professionals and researchers. The chapters reflect the diverse and dynamic research being undertaken in a variety of different species throughout the world. Whether the animals have roles in food security, agriculture, or as companion, wild, or working animals, the lessons we learn impact on many areas of the profession. This book highlights research ranging from the cardiovascular and musculoskeletal systems, prostate and hoof, through to histopathology, imaging, and molecular techniques. It investigates both

healthy and pathological conditions at differing stages of life. The importance of each cell and tissue through to the whole organism is explored alongside the methodologies used to understand these vital structures and functions. Simulations are frequently used techniques for training, performance assessment, and prediction of future outcomes. In this thesis, the term “human-centered simulation” is used to refer to any simulation in which humans and human cognition are integral to the simulation’s function and purpose (e.g., simulation-based

training). A general problem for human-centered simulations is to capture the cognitive processes and activities of the target situation (i.e., the real world task) and recreate them accurately in the simulation. The prevalent view within the simulation research community is that cognition is internal, decontextualized computational processes of individuals. However, contemporary theories of cognition emphasize the importance of the external environment, use of tools, as well as social and cultural factors in cognitive practice.

Consequently, there is a need for research on how such contemporary perspectives can be used to describe human-centered simulations, re-interpret theoretical constructs of such simulations, and direct how simulations should be modeled, designed, and evaluated. This thesis adopts distributed cognition as a framework for studying human-centered simulations. Training and assessment of emergency medical management in a Swedish context using the Emergo Train System (ETS) simulator was adopted as a case study. ETS

simulations were studied and analyzed using the distributed cognition for teamwork (DiCoT) methodology with the goal of understanding, evaluating, and testing the validity of the ETS simulator. Moreover, to explore distributed cognition as a basis for simulator design, a digital re-design of ETS (DIGEMERGO) was developed based on the DiCoT analysis. The aim of the DIGEMERGO system was to retain core distributed cognitive features of ETS, to increase validity, outcome reliability, and to provide a digital platform for emergency medical

studies. DIGEMERGO was evaluated in three separate studies; first, a usefulness, usability, and facevalidation study that involved subject-matter-experts; second, a comparative validation study using an expert-novice group comparison; and finally, a transfer of training study based on self-efficacy and management performance. Overall, the results showed that DIGEMERGO was perceived as a useful, immersive, and promising simulator - with mixed evidence for validity - that demonstrated increased general self-efficacy and management

performance following simulation exercises. This thesis demonstrates that distributed cognition, using DiCoT, is a useful framework for understanding, designing and evaluating simulated environments. In addition, the thesis conceptualizes and re-interprets central constructs of human-centered simulation in terms of distributed cognition. In doing so, the thesis shows how distributed cognitive processes relate to validity, fidelity, functionality, and usefulness of human-centered simulations. This thesis thus provides a new understanding of human-centered

simulations that is grounded in distributed cognition theory. This comprehensive, first-of-its kind title is an indispensable resource for pharmacists looking to learn or improve crucial patient assessment skills relevant to all pharmacy practice settings. Pharmacists' role as health care practitioners is evolving as they are taking a more active part in primary patient care -- helping patients manage their medications and diseases, providing patient education, and, in some jurisdictions, prescribing and adapting medications. To perform their day-

to-day duties, pharmacists are best-served using a framework called the patient care process. This framework involves three steps: patient assessment; care plan development and implementation; and monitoring and follow up. Organized in four parts, this practical book begins with introductory chapters regarding the basics of patient assessment and the patient care process. Part II includes a detailed assessment of common symptoms encountered by pharmacists. Part III discusses assessment of patients with various chronic illnesses. Part IV addresses select

specialized topics and assessment considerations. An invaluable contribution to the literature, *Patient Assessment in Clinical Pharmacy: A Comprehensive Guide* will be of great benefit to pharmacists, regardless of their practice setting, and to pharmacy students as well. Structured to be a companion to the recently published *Handbook of Transfusion Medicine*, the *Handbook of Pediatric Transfusion Medicine* is dedicated to pediatric hematology-oncology and transfusion medicine, a field which remains ambiguous and

which has generated few comprehensive texts. This book stands alone as one of the few texts that addresses transfusion issues specific to pediatric medicine. Written in an eminently readable style, this authoritative handbook is a requirement for any pediatric physician or caregiver. Neonatal and fetal immune response and in utero development issues Blood compatibility and pre-transfusion testing issues specific to pediatric and neonatal transfusion Therapeutic apheresis including red blood cell exchange and prophylactic chronic erythrocytapheresis

for sickle cell patients Also includes a section that concentrates on the consent, quality and legal issues of blood transfusion and donation
