Transforming Markets in the Built Environment Nov 13 2019 There is an urgent need to build human capacity to make the often vulnerable and exposed buildings and communities we live and work in more resilient

to the changing social, economic and physical environments around us. Extensive research has been done over the last decades on both mitigation and adaptation to climate change in the built environment, but the outputs of much of this research have failed to result in the wider uptake of effective greenhouse gas emission reduction solutions. This volume introduces credible 'fresh thinking' on how this may be done. For the first time an emerging generation of research is brought together that is directly concerned with understanding, influencing and leading the transformation of markets and thinking in the built environment. Chapters cover: defining values setting targets consumer motivation selling existing ideas better developing new design principles, paradigms and programmes optimizing solutions to ensure that when change does happen, it does so in the right direction. Papers are contributed by leading experts in fields ranging from philosophy, the social, political and physical sciences, engineering, architecture, mathematics and complexity science. The resulting volume will be essential reading for all those involved with changing the mindsets of a generation on the need to, and ways to, build resilience to rapid change and transforming markets in the built environment.

A Survey of Aboriginal Archaeological Sites in Southeast Queensland Feb 26 2021 Survey of archaeological sites in south-eastern Queensland based on the collection records of the Queensland museum; survey methodology; summary of Queensland museum registers; site categories; location assessment; artefact classification; field survey results; brief site description and location.

There is also a handy list of 4WD parks. Each regional section outlines the area's 4WD Tracks and Featured Camping Areas, with a Camping Directory at the end to provide comprehensive coverage of other camping areas.

The Duun'idjawu Language of the Southeast Queensland Sep 16 2022 In the late 1950s and early 1960s, before he began work on the languages of New Guinea, Stephen Wurm undertook considerable fieldwork on languages of northern New South Wales and southern Queensland. His fullest materials were on Duu_idjawu, spoken just to the northwest of Brisbane, and were recorded between 1955 and 1964. Wurm was generous in making his materials available to selected researchers, and in 1997, an arrangement was made with Wurm for Suzanne Kite to write an MA thesis analysing these materials. These consisted of tapes and transcriptions, with Wurm's translations of these in his own shorthand, which only he could read. When he was in Canberra, Wurm would spend one or two afternoons each week going over these materials with Kite, explaining the shorthand and reviving his knowledge of the language. He had never written a draft grammar of Duungidjawu, but effectively had one in his head. It was hard to remember things exactly after a period of almost forty years and Kite sometimes mediated between what was on the tapes and Wurm's explications during their collaboration. Stephen Wurm passed away in late 2001, after the thesis had been approved but before this work could be published. This is a slightly revised version of Kite's thesis. It comprises an invaluable record of the language of the Duungidjawu people, and through this of their traditions, customs and laws. It is the only substantial record of a language which differs in various respects from prototypical non-prefixing Australian languages. It has five vowels and a fair number of monosyllabic words. Pronouns and nouns referring to humans or to dogs have distinct case forms. Following the grammar sketch are all the texts recorded by Wurm and a full vocabulary and thesaurus. All Wurm's information was provided by Willie McKenzie, believed to be about eighty years old in October 1955. He died in 1965.

Psilocybin Mushrooms of South East Queensland, Australia Oct 05 2021

What are the main harms associated with foraging for and eating psilocybin mushrooms - the mushrooms themselves, poisonous look-alikes, or the laws surrounding their use and possession? T. K. Nixon guides us through thousands of years of history, fifty years of prohibition and a modern, scientific, mushroom renaissance in this one-of-a-kind work. With over forty full-colour, high-definition photos, identification and environmental information, this book contains all you need to avoid the harms associated with psilocybin mushroom foraging forever!

Flora of South-eastern Queensland Jan 08 2022

Rare Tropical Fruit Trees in Southeast Queensland Mar 18 2020

Aboriginal Pathways Feb 21 2023 The first European chroniclers of Indigenous Culture in Australia looked for the sensational, often neglecting its more significant features. In his fourth book on Queensland's early history, J. G. Steele corrects this imbalance with a detailed account of the Indigenous people of the subtropical coast at the time of their earliest contact with white settlers. The region described is centred on Brisbane, extending along the coast to Fraser Island, to Evens Head in New South Wales, and inland to the Great Dividing Range. Drawing on early accounts, photographs, place-names, languages, legends, archeology, and museum collections, *Aboriginal Pathways* provides a wealth of fascinating and important material, much of it relevant to debates on Indigenous land rights and sacred sites of the 1980s.

Rare and Threatened Plants of South Eastern Queensland Aug 15

2022 This book is a comprehensive guide to the rare and threatened plants of South Eastern Queensland Australia. Three hundred and Thirty Two (332) Species are profiled and illustrated. This book is a must for anyone working in plant conservation in Eastern Australia. Some of the species are illustrated for the first time and this is the only book currently available that details conservation significant flora in South Eastern Queensland. A decade in the making, to capture images for this book, Lui climbed many of the mountain peaks in SE QLD to find their endemic plants, often returning more than once to capture that elusive flower or fruit. Lui also abseiled off cliffs to document and conserve some relict species from the last ice age and discovered a couple of taxa

new to science in the process. Thousands of kilometers driven and hundreds hiked, into some of the most remote places, in our spectacular corner of Queensland have created this guide to our most conservation significant flora species. Lets all work together to ensure the survival of our most threatened plants into the future.

Mangroves to Mountains Aug 03 2021 A comprehensive native plant identification guide covering the diverse habitats of South East Queensland and Northern NSW. MANGROVES TO MOUNTAINS is a comprehensive native plant identification guide covering the diverse habitats of South East Queensland and Northern NSW. This revised edition covers more than 2,200 species of plants with accompanying full colour photographs, making it an easy to use, in the field tool for the identifying the region's wonderful array of native flora.

Trends in Journeys to Work in South-East Queensland Mar 30 2021

Suburban and Environmental Weeds of South-East Queensland Feb 15 2020 Suburban and Environmental Weeds - Version 2 will be an invaluable resource to advisors, researchers, students, landcare and bushcare volunteers, weed control officers and anyone interested in learning more about the weeds of south-eastern Queensland and north-eastern New South Wales.
