Unifying Electrical Engineering and Electronics Engineering Mar 18 2020 Unifying Electrical Engineering and Electronics Engineering is based on the Proceedings of the 2012 International Conference on Electrical and Electronics Engineering (ICEE 2012). This book collects the peer reviewed papers presented at the conference. The aim of the conference is to unify the two areas of Electrical and Electronics Engineering. The book examines trends and techniques in the field as well as theories and applications. The editors have chosen to include the following topics; biotechnology, power engineering, superconductivity circuits, antennas technology, system architectures and telecommunication.

e-World 8 Apr 18 2020

Magnetodynamic Phenomena in the Solar Atmosphere Apr 11 2022 These are the Proceedings of Colloquium No. 153 of the International Astronomical Union, held at Makuhari near Tokyo on May 22 - 26, 1995, and hosted by the National Astronomical Observatory. This meeting was intended to be an interdisciplinary meeting between researchers of solar and stellar activity, in order for them to exchange the newest information in each field. While each of these areas has seen remarkable advances in recent years, and while the researchers in each field have felt that information from the other's domain would be extremely useful in their own work, there have not been very many opportunities for intensive exchanges of information between these closely related fields. We therefore expected much from this meeting in providing stellar researchers with new results of research on the counterparts of their targets of research, spatially and temporarily resolved, as observed on the Sun. Likewise we hoped to provide solar researchers with new results on gigantic versions of their targets of research under the very different physical circumstances on other active stars. It was our greatest pleasure that we had wide attendance of experts and active researchers of both research fields from all over the world. This led to extremely interesting talks and very lively discussions, thereby stimulating the exchange of ideas across the fields.

Singularities in Fluids, Plasmas and Optics Nov 25 2020 *Singularities in Fluids, Plasmas and Optics*, which contains the proceedings of a NATO Workshop held in Heraklion, Greece, in July 1992, provides a survey of the state of the art in the analysis and computation of singularities in physical problems drawn from fluid mechanics, plasma physics and nonlinear optics. The singularities include curvature singularities on fluid interfaces, the onset of turbulence in 3-D inviscid flows, focusing singularities for laser beams, and magnetic reconnection. The highlights of the book include the nonlinear Schrödinger equation for describing laser beam focusing, the method of complex variables for the analysis and computation of singularities on fluid interfaces, and studies of singularities for the 3-D Euler equations. The book is suitable for graduate students and researchers in these areas.

Hot Spot Aug 15 2022 This book provides an extensive examination of the major conflicts in the

extremely volatile region of sub-Saharan Africa and their ramifications throughout the continent and beyond. * Maps of regions and countries showing conflict areas such as Biafra and Katanga *
Photographs of key figures, places, and events

Offshore Technology in Civil Engineering, Volume Two Feb 15 2020 The Offshore Technology Conference (OTC) is the world's leading event for the development of offshore resources in the fields of drilling, exploration, production, and environmental protection. *Offshore Technology in Civil Engineering: Hall of Fame Papers from the Early Years, Volume Two* is a collection of the nine winning papers inducted in 2007. The classic documents contained in this volume form the core of current practice worldwide, covering major topics in offshore technology such as long-term wave probabilities, tubular joints, offshore gravity structures, wave return periods, and linearization techniques.

Integrated Interconnect Technologies for 3D Nanoelectronic Systems Jun 01 2021 This cutting-edge book on off-chip technologies puts the hottest breakthroughs in high-density compliant electrical interconnects, nanophotonics, and microfluidics at your fingertips, integrating the full range of mathematics, physics, and technology issues together in a single comprehensive source. You get full details on state-of-the-art I/O interconnects and packaging, including mechanically compliant I/O approaches, fabrication, and assembly, followed by the latest advances and applications in power delivery design, analysis, and modeling. The book explores interconnect structures, materials, and packages for achieving high-bandwidth off-chip electrical communication, including optical interconnects and chip-to-chip signaling approaches, and brings you up to speed on CMOS integrated optical devices, 3D integration, wafer stacking technology, and through-wafer interconnects.

The Hot Zone Mar 10 2022 The bestselling landmark account of the first emergence of the Ebola virus. Now a mini-series drama starring Julianna Margulies, Topher Grace, Liam Cunningham, James D'Arcy, and Noah Emmerich on National Geographic. A highly infectious, deadly virus from the central African rain forest suddenly appears in the suburbs of Washington, D.C. There is no cure. In a few days 90 percent of its victims are dead. A secret military SWAT team of soldiers and scientists is mobilized to stop the outbreak of this exotic "hot" virus. *The Hot Zone* tells this dramatic story, giving a hair-raising account of the appearance of rare and lethal viruses and their "crashes" into the human race. Shocking, frightening, and impossible to ignore, *The Hot Zone* proves that truth really is scarier than fiction.

Proactive Policing Oct 25 2020 Proactive policing, as a strategic approach used by police agencies to prevent crime, is a relatively new phenomenon in the United States. It developed from a crisis in confidence in policing that began to emerge in the 1960s because of social unrest, rising crime rates, and growing skepticism regarding the effectiveness of standard approaches to policing. In response, beginning in the 1980s and 1990s, innovative police practices and policies that took a more proactive approach began to develop. This report uses the term "proactive policing" to refer to all policing strategies that have as one of their goals the prevention or reduction of crime and disorder and that are not reactive in terms of focusing primarily on uncovering ongoing crime or on investigating or responding to crimes once they have occurred. Proactive policing is distinguished from the everyday decisions of police officers to be proactive in specific situations and instead refers to a strategic decision by police agencies to use proactive police responses in a programmatic way to reduce crime. Today, proactive policing strategies are used widely in the United States. They are not isolated programs used by a select group of agencies but rather a set of ideas that have spread across the landscape of policing. *Proactive Policing* reviews the evidence and discusses the data and methodological gaps on: (1) the effects of different forms of proactive policing on crime; (2) whether they are applied in a discriminatory manner; (3) whether they are being used in a legal fashion; and (4) community reaction. This report offers a comprehensive evaluation of proactive policing that includes not only its crime prevention impacts but also its broader implications for justice and U.S. communities.

When Crime Appears Dec 15 2019 In recent years, the idea of emergence, which suggests that

observed patterns in behavior and events are not fully reductive and stem from complex lower-level interactions, has begun to take hold in the social sciences. Criminologists have started to use this framework to improve our general understanding of the etiology of crime and criminal behavior. *When Crime Appears: The Role of Emergence* is concerned with our ability to make sense of the complex underpinnings of the end-stage patterns and events that we see in studying crime and offers an early narrative on the concept of emergence as it pertains to criminological research. Collectively, the chapters in this volume provide a sense of why the emergence framework could be useful, outlines its core conceptual properties, provides some examples of its potential application, and presents some discussion of methodological and analytic issues related to its adoption.

Advances in Applied Biotechnology Jan 16 2020 This book presents and discusses the latest advances in biotechnology, and selected challenges and opportunities in connection with its industrial applications. It gathers the proceedings of the 3rd International Conference on Applied Biotechnology (ICAB2016), held on November 25–27, 2016 in Tianjin, China, which continued the success of the previous biennial ICAB conferences, providing a platform for scientists and engineers to exchange ideas about the frontiers of biotechnology. Topics include (but are not limited to) microbial genetics and breeding; biological separation and purification; optimization and control of biological processes; and advances in biotechnology. Offering key insights into the latest breakthroughs, the book is intended for industrial leaders, professionals and research pioneers in the field of applied biotechnology.

Hot Spot: North America and Europe Jul 14 2022 Even in the relatively serene world of North America and Western Europe, numerous conflicts with the propensity for sustained political violence are carried out by domestic groups with alarming regularity. This in-depth volume explores conflicts and potential hot spot areas in these regions, from anti-globalization protests to immigration politics to the Basque provinces and the ETA. Coverage is divided into three regions—the established democracies of the U.S., Canada, and Western Europe; the democratizing countries of post-communist Europe; and the more volatile region encompassing Russia, the Balkans, the Caucasus, and Post-Soviet Eastern Europe—for a greater understanding of geographic interrelationships. This comprehensive volume is a first-stop reference source for the most significant political, cultural, and economic conflicts in North America and Europe today.

Thermal Convection Jan 08 2022 *Thermal Convection - Patterns, Stages of Evolution and Stability Behavior* provides the reader with an ensemble picture of the subject, illustrating the state-of-the-art and providing the researchers from universities and industry with a basis on which they are able to estimate the possible impact of a variety of parameters. Unlike earlier books on the subject, the heavy mathematical background underlying and governing the behaviors illustrated in the text are kept to a minimum. The text clarifies some still unresolved controversies pertaining to the physical nature of the dominating driving force responsible for asymmetric/oscillatory convection in various natural phenomena and/or technologically important processes and can help researchers in elaborating and validating new, more complex models, in accelerating the current trend towards predictable and reproducible natural phenomena and in establishing an adequate scientific foundation to industrial processes. *Thermal Convection - Patterns, Stages of Evolution and Stability Behavior* is intended as a useful reference guide for specialists in disciplines such as the metallurgy and foundry field and researchers and scientists who are now coordinating their efforts to improve the quality of semiconductor or macromolecular crystals. The text may also be of use to organic chemists and materials scientists, atmosphere and planetary physicists, as well as an advanced level text for students taking part in courses on the physics of fluids, fluid mechanics, the behavior and evolution of non-linear systems, environmental phenomena and materials engineering.

Hot Spots Oct 17 2022 You always know when you are in a Hot Spot. You feel energized and vibrantly alive. Your brain is buzzing with ideas, and the people around you share your joy and excitement. Things you've always known become clearer, adding value becomes more possible. Ideas and insights from others miraculously combine with your own to create new thinking and innovation. When Hot Spots arise in and between companies, they provide energy for exploiting and

applying knowledge that is already known and genuinely exploring what was previously unknown. Hot Spots are marvelous creators of value for organizations and wonderful, life-enhancing phenomena for each of us. Lynda Gratton has spent more than ten years investigating Hot Spots—discovering how they emerge and how organizations can create environments where they will proliferate and thrive. She has studied dozens of companies and talked to hundreds of employees, managers, and executives in the US, Europe, and Asia. She has asked the important questions: Why and when do Hot Spots emerge? What is it about certain groups of people that support the emergence of Hot Spots? What role do leaders play? She's discovered a host of elements that together contribute to the emergence of Hot Spots—creating energy and excitement, and supporting and channeling that energy into productive outcomes. In this groundbreaking book, Gratton describes four crucial qualities that an organizational culture must have to support the emergence of Hot Spots, looks at what leaders can do to encourage them, and offers activities and tools you can use in your own company to increase the probability of them arising. In these days when traditional organizational boundaries are becoming barriers to progress, Gratton offers advice and guidance that you can use right now to increase the probability of Hot Spots emerging in your organization.

The Hot Zone May 20 2020 Imagine a killer with the infectiousness of the common cold and power of the Black Death. Imagine something so deadly that it wipes out 90% of those it touches. Imagine an organism against which there is no defence. But you don't need to imagine. Such a killer exists: it is a virus and its name is Ebola. *The Hot Zone* tells what happens when the unthinkable becomes reality: when a deadly virus, from the rain forests of Africa, crosses continents and infects a monkey house ten miles from the White House. Ebola is that reality. It has the power to decimate the world's population. Try not to panic. It will be back. There is nothing you can do...

Gamma Knife Neurosurgery in the Management of Intracranial Disorders II Nov 13 2019 The articles in this volume cover the various radiosurgical techniques used to treat benign and malignant intracranial tumors, cavernous malformations, and functional disorders, as well as a wide array of specific details on medical physics, neuroimaging, and anesthetic support. Particular emphasis is put on the optimal combination of microneurosurgery and radiosurgery for attaining the best functional results in patients with vestibular schwannomas, craniopharyngiomas, and pituitary adenomas, and on the most effective methods of treatment planning and radiation dosimetry in cases of metastatic brain tumors. The highlighted clinical aspects include indications for radiosurgery and the prediction of patients' prognosis, along with analysis of outcomes in comparison with results achieved by other modalities in the context of multifaceted therapeutic strategies. In addition, possible options for applying advanced treatment using such modern devices as Leksell Gamma Knife Perfexion™ and Icon™ are presented in depth. This information will interest both radiosurgical practitioners and neurosurgeons, and help them to provide optimal care and to achieve the greatest benefit of their patients. This book will serve as an excellent companion for the previous publication "Gamma Knife Neurosurgery in the Management of Intracranial Disorders" (Acta Neurochirurgica Supplement, Volume 116, Springer, 2013).

The Dog Owner's Home Hot Spot First Aid Companion for Dogs Jun 13 2022 Does your dog have a hot spot? Download this book and get instant access to my powerful "top secret" recipe for a hot spot treatment that works really well - plus more information on how to prevent your dog from getting hotspots in the first place **READER REVIEWS:** "Very good book! Covers everything you need to know in a very concise and understandable way. And these suggestions for treatment work! For every dog owner!, L Cheron" What Are Hot Spots? A hot spot is a very painful and fast growing skin condition for any dog. And they can happen extremely fast too! Often over night, or in just a few hours. So you want to do your best to take care of your dog once it gets a hot spot, but if at all possible, do your best to prevent them from getting a hot spot in the first place. Within this book, I will cover the what and why of what dog hot spots are and an in-depth explanation of how dog hot spots happen in the first place. But no matter the cause, once your dog gets a hot spot, the most important thing you must be aware of, as an owner, is how to treat it. Within the pages of this book I

have also included my "top secret" recipe for a dog hot spot treatment I have been using successfully with my own dogs for years now - which can be made quickly and easily and with ingredients you can find easily, and often, already within your own medicine cabinet.

Proceedings of the 1995 International Conference on Parallel Processing Sep 04 2021 This set of technical books contains all the information presented at the 1995 International Conference on Parallel Processing. This conference, held August 14 - 18, featured over 100 lectures from more than 300 contributors, and included three panel sessions and three keynote addresses. The international authorship includes experts from around the globe, from Texas to Tokyo, from Leiden to London. Compiled by faculty at the University of Illinois and sponsored by Penn State University, these Proceedings are a comprehensive look at all that's new in the field of parallel processing.

Code of Federal Regulations Feb 26 2021 Special edition of the Federal Register, containing a codification of documents of general applicability and future effect ... with ancillaries.

Information Technologies in Medicine Oct 05 2021 ITiB'2016 is the 5th Conference on Information Technologies in Biomedicine organized by the Department of Informatics & Medical Equipment of Silesian University of Technology every other year. The Conference is under the auspices of the Committee on Biocybernetics and Biomedical Engineering of the Polish Academy of Sciences. The meeting has become a recognized event that helps to bridge the gap between methodological achievements in engineering and clinical requirements in medical diagnosis, therapy, and rehabilitation. Mathematical information analysis, computer applications together with medical equipment and instruments have become standard tools underpinning the current rapid progress with developing Computational Intelligence. Members of academic societies of technical and medical background present their research results and clinical implementations. This proceedings (divided in 2 volumes) include the following sections: □ Image Processing □ Signal Processing □ Medical Information System & Database □ Ambient Assisted Living □ Bioinformatics □ Modeling & Simulation □ Biomechatronics □ Biomaterials

Manual of Cardiovascular Diagnosis and Therapy Oct 13 2019 Thoroughly revised and updated for its Fifth Edition, this manual is a practical quick-reference guide to the immediate and long-term evaluation and management of cardiovascular disease. In an easy-to-scan outline format, the book describes current strategies for diagnosis and medical and surgical management of all cardiovascular disorders. Numerous tables provide rapid access to essential information. This edition is a major revision with a distinguished new co-author, Gordon A. Ewy, MD. Sections on coronary artery disease, acute myocardial infarction, and lipids have been completely reworked and chapters on therapy and cardiopulmonary resuscitation have been rewritten. This edition also includes more tables and drawings.

Proceedings of the 15th International Ship and Offshore Structures Congress Sep 23 2020
KEY FEATURES: Provides researchers in Ocean engineering with a thorough review of the latest research in the field Lengthy reports by leading experts A valuable resource for all interested in ocean engineering DESCRIPTION: The International Ship and Offshore Congress (ISSC) is a forum for the exchange of information by experts undertaking and applying marine structural research. These three volumes contain the eight technical committee reports, six Specialist Committee and 2 Special Task Committee reports which were presented for the 15th International Ship and Offshore Structures Congress (ISSC 2004) in San Diego USA, between 11th and 15th August 2003. Volume III will be published in 2004 and is to contain the discussion of the reports, the chairmen's reply, the text of the invited Lecture and the congress report of ISSC 2003.

Embedded Computer Systems: Architectures, Modeling, and Simulation Apr 30 2021 This book constitutes the refereed proceedings of the 9th International Workshop on Architectures, Modeling, and Simulation, SAMOS 2009, held on Samos, Greece, on July 20-23, 2009. The 18 regular papers presented were carefully reviewed and selected from 52 submissions. The papers are organized in topical sections on architectures for multimedia, multi/many cores architectures, VLSI architectures design, architecture modeling and exploration tools. In addition there are 14 papers from three special sessions which were organized on topics of current interest: instruction-set customization,

reconfigurable computing and processor architectures, and mastering cell BE and GPU execution platforms.

Thirty-fourth International Symposium for Testing and Failure Analysis Jan 28 2021

Hot Spot Sep 16 2022 The complete first season of the cult 1990s US sitcom based around the antics of chat show host Larry Sanders (Garry Shandling). Episodes are: 'What Have You Done for Me Lately?', 'The Promise', 'The Spider Episode', 'The Guest Host', 'The New Producer', 'The Flirt Episode', 'Hank's Contract', 'Out of the Loop', 'Talk Show', 'Party', 'The Warmth Episode', 'A Brush with the Elbow of Greatness' and 'Hey Now'.

Hot Spots Feb 09 2022 You always know when you are in a Hot Spot. You feel energized and vibrantly alive. Your brain is buzzing with ideas, and the people around you share your joy and excitement. Things you've always known become clearer, adding value becomes more possible. Ideas and insights from others miraculously combine with your own to create new thinking and innovation. When Hot Spots arise in and between companies, they provide energy for exploiting and applying knowledge that is already known and genuinely exploring what was previously unknown. Hot Spots are marvelous creators of value for organizations and wonderful, life-enhancing phenomena for each of us. Lynda Gratton has spent more than ten years investigating Hot Spots--discovering how they emerge and how organizations can create environments where they will proliferate and thrive. She has studied dozens of companies and talked to hundreds of employees, managers, and executives in the US, Europe, and Asia. She has asked the important questions: Why and when do Hot Spots emerge? What is it about certain groups of people that support the emergence of Hot Spots? What role do leaders play? She's discovered a host of elements that together contribute to the emergence of Hot Spots--creating energy and excitement, and supporting and channeling that energy into productive outcomes. In this groundbreaking book, Gratton describes four crucial qualities that an organizational culture must have to support the emergence of Hot Spots, looks at what leaders can do to encourage them, and offers activities and tools you can use in your own company to increase the probability of them arising. In these days when traditional organizational boundaries are becoming barriers to progress, Gratton offers advice and guidance that you can use right now to increase the probability of Hot Spots emerging in your organization.

Perspectives of System Informatics Dec 27 2020 This book constitutes the refereed post-conference proceedings of the Second International Andrei Ershov Memorial Conference on System Informatics, held in Akademgorodok, Novosibirsk, Russia, in June 1996. The 27 revised full papers presented together with 9 invited contributions were thoroughly refereed for inclusion in this volume. The book is divided in topical sections on programming methodology, artificial intelligence, natural language processing, machine learning, dataflow and concurrency models, parallel programming, supercompilation, partial evaluation, object-oriented programming, semantics and abstract interpretation, programming and graphical interfaces, and logic programming.

Astrophysical Jets and Beams Jul 22 2020 An up-to-date study of astrophysical jets that will appeal to students and researchers in all areas of astrophysics.

Advances in Turbulence IV Aug 23 2020 The European Turbulence Conferences have been organized under the auspices of the European Mechanics Committee (Euromech) to provide a forum for discussion and exchange of recent and new results in the field of turbulence. The first conference was organized in Lyon in 1986 with 152 participants. The second and third conferences were held in Berlin (1988) and Stockholm (1990) with 165 and 172 participants respectively. The fourth was organized in Delft from 30 June to 3 July 1992 by the J.M. Burgers Centre. There were 214 participants from 22 countries. This steadily growing number of participants demonstrates both the success and need for this type of conference. The main topics of the Fourth European Turbulence Conference were: Dynamical Systems and Transition; Statistical Physics and Turbulence; Experiments and Novel Experimental Techniques; Particles and Bubbles in Turbulence; Simulation Methods; Coherent Structures; Turbulence Modelling and Compressibility Effects. In addition a special session was held on the subject of Cellular Automata. Each of the sessions was introduced with a survey lecture. The lecturers were: W. Eckhaus, A.J. Libchaber, L. Katgerman, F. Durst, M.

Lesieur, B. Legras, D.G. Dritschel and P. Bradshaw. The contributions of the participants were subdivided into oral and poster presentations. In addition to the normal program, some Special Interest Groups of Ercoftac (European Research Community on Flow, Turbulence and Combustion) presented their research activities in the form of a poster.

Assessment of Safety and Risk with a Microscopic Model of Detonation Jun 20 2020 Whereas the current plane wave, homogeneous flow detonation physics is an excellent engineering tool for numerical predictions under given conditions, the multi-hot-spot-model is an additional tool for analyzing phenomena that cannot be explained by classical calculations. The real benefit comes from being able to understand, without any artificial assumptions, the whole phenomenology of detonations and explosions. By specifying pressure generating mechanisms, one is able to see that the current treatment of the detonics of energetic materials is only a very special - but powerful - case of explosion events and hazards. It becomes clear that physical explosions must be taken into account in any safety considerations. In these terms it is easy to understand why even liquid carbon dioxide and inert silo materials can explode. A unique collection of unexpected events, which might surprise even specialists, has resulted from the evaluation of the model.-

Structural Hot-Spot Stress Approach to Fatigue Analysis of Welded Components Nov 18 2022 This book provides background and guidance on the use of the structural hot-spot stress approach to fatigue analysis. The book also offers Design S-N curves for use with the structural hot-spot stress for a range of weld details, and presents parametric formulas for calculating stress increases due to misalignment and structural discontinuities. Highlighting the extension to structures fabricated from plates and non-tubular sections. The structural hot-spot stress approach focuses on cases of potential fatigue cracking from the weld toe and it has been in use for many years in tubular joints. Following an explanation of the structural hot-spot stress, its definition and its relevance to fatigue, the book describes methods for its determination. It considers stress determination from both finite element analysis and strain gauge measurements, and emphasizes the use of finite element stress analysis, providing guidance on the choice of element type and size for use with either solid or shell elements. Lastly, it illustrates the use of the recommendations in four case studies involving the fatigue assessment of welded structures using the structural hot-spot stress

Life Cycle Management May 12 2022 This book provides insight into the Life Cycle Management (LCM) concept and the progress in its implementation. LCM is a management concept applied in industrial and service sectors to improve products and services, while enhancing the overall sustainability performance of business and its value chains. In this regard, LCM is an opportunity to differentiate through sustainability performance on the market place, working with all departments of a company such as research and development, procurement and marketing, and to enhance the collaboration with stakeholders along a company's value chain. LCM is used beyond short-term business success and aims at long-term achievements by minimizing environmental and socio-economic burden, while maximizing economic and social value.
