Guidelines for Trauma Quality Improvement Programmes Mar 18 2020 In order to promote greater implementation of

effective, affordable and sustainable trauma systems globally, the World Health Organization and the International Association for Trauma Surgery and Intensive Care have worked collaboratively to produce these guidelines on trauma quality improvement. The response to the growing problem of injury needs to include the improvement of care of the injured. Quality improvement (QI) programs offer an affordable and sustainable means to implement such improvements. These programs enable health care institutions to better monitor trauma care services, better detect problems in care, and more effectively enact and evaluate corrective measures targeted at these problems. The goal of this publication is to give guidance on ways in which health care institutions globally can implement QI programs oriented to strengthening care of the injured. This guidance is intended to be universally applicable to all countries, no matter what their economic level. These guidelines provide basic definitions and an overview of the field of QI, so that those not familiar with this field will have a working knowledge of it. Evidence of the benefit of QI in general and trauma QI in particular is then laid out. The main part of the publication reviews the most common methods of trauma QI, written in a how-do-to fashion. This covers a wide range of techniques. The first two of these are especially emphasized as ways in which to strengthen trauma QI in the setting of low-income and middle-income countries.

Trauma Red Sep 04 2021 The incredible life story of the trauma surgeon who helped save Congresswoman Gabby Giffords—from his upbringing in South Korea and Africa to the gripping dramas he faces in a typical day as a medical genius. Congresswoman Gabby Giffords is a household name: most people remember that awful day in Arizona in 2011 when she was a victim of an act of violence that left six dead and thirteen wounded. What many people don't know is that it was Dr. Peter Rhee who played a vital role in her survival. Born in South Korea, Rhee moved with his family to Uganda where he watched his public health surgeon father remove a spear from a man's belly—and began his lifelong interest in medicine. What came next is this compelling portrait of how one becomes a world class trauma surgeon: the specialized training, the mindset to make critical decisions, and the practiced ability to operate on the human body. Dr. Rhee is so eminent that when President Clinton traveled to China, he was selected to accompany the president as his personal physician. In Trauma Red we learn how Rhee's experiences were born from the love and sacrifices of determined parents, and of Rhee's own quest to become as excellent a surgeon as possible. Trauma Red chronicles the patient cases Dr. Rhee has handled over two decades on two distinct battle fronts: In Iraq

and Afghanistan, where he served as a frontline US Navy surgeon trying to save young American soldiers, and the urban zones of Los Angeles and Washington, DC, where he has been confronted by an endless stream of bloody victims of civilian violence and accidents. Tough and outspoken, Dr. Rhee isn't afraid to take on the politics of violence in America and a medical community that too often resists innovation. His story provides an inside look into a fascinating medical world, a place where lives are saved every day.

A National Trauma Care System Jan 08 2022 Advances in trauma care have accelerated over the past decade, spurred by the significant burden of injury from the wars in Afghanistan and Iraq. Between 2005 and 2013, the case fatality rate for United States service members injured in Afghanistan decreased by nearly 50 percent, despite an increase in the severity of injury among U.S. troops during the same period of time. But as the war in Afghanistan ends, knowledge and advances in trauma care developed by the Department of Defense (DoD) over the past decade from experiences in Afghanistan and Iraq may be lost. This would have implications for the quality of trauma care both within the DoD and in the civilian setting, where adoption of military advances in trauma care has become increasingly common and necessary to improve the response to multiple civilian casualty events. Intentional steps to codify and harvest the lessons learned within the military's trauma system are needed to ensure a ready military medical force for future combat and to prevent death from survivable injuries in both military and civilian systems. This will require partnership across military and civilian sectors and a sustained commitment from trauma system leaders at all levels to assure that the necessary knowledge and tools are not lost. A National Trauma Care System defines the components of a learning health system necessary to enable continued improvement in trauma care in both the civilian and the military sectors. This report provides recommendations to ensure that lessons learned over the past decade from the military's experiences in Afghanistan and Iraq are sustained and built upon for future combat operations and translated into the U.S. civilian system.
