Most startups fail. But many of those failures are preventable. The Lean Startup is a new approach being adopted across the globe, changing the way companies are built and new products are launched. Eric Ries defines a startup as an organization dedicated to creating something new under conditions of extreme uncertainty. This is just as true for one person in a garage or a group of seasoned professionals in a Fortune 500 boardroom. What they have in common is a mission to penetrate that fog of uncertainty to discover a successful path to a sustainable business. The Lean Startup approach fosters companies that are both more capital efficient and that leverage human creativity more effectively. Inspired by lessons from lean manufacturing, it relies on "validated learning," rapid scientific experimentation, as well as a number of counter-intuitive practices that shorten product development cycles, measure actual progress without resorting to vanity metrics, and learn what customers really want. It enables a company to shift directions with agility, altering plans inch by inch, minute by minute. Rather than wasting time creating elaborate business plans, The Lean Startup offers entrepreneurs—in companies of all sizes—a way to test their vision continuously, to adapt and adjust before it's too late. Ries provides a scientific approach to creating and managing successful startups in a age when companies need to innovate more than ever. Want to start the small business of your dreams? In response to this trend, this book presents an in-depth analysis of a corpus of authentic business studies lectures, focusing on spoken, academic, disciplinary and professional features (e.g., speech rate, interactive devices, specialized lexis) that are crucial to comprehension, but often problematic for non-native speakers. The investigation adopts an original multi-pronged approach including quantitative, qualitative and comparative analyses. It utilizes

techniques drawn mainly from corpus linguistics and discourse analysis, but also integrates observational and ethnographic methods to provide unique extra-linguistic insights. The study is thus a full-circle interpretive account of this dynamic spoken genre where academia and profession converge. The book shows how business studies lectures are characterised by a synergy of discourses and communicative channels that reflect the community of practice, highlighting the need to help international business students develop multiple literacies to overcome present and future challenges. This book gives an introduction to the effective use of mathematical and statistical techniques in business operations, working from first principles and building towards a complete understanding of first-level undergraduate quantitative methods.
