The book covers the pharmacology necessary for accredited training programmes in non-medical prescribing and certification in access and supply of prescription-only medicines and will be useful as an ongoing reference for future use in practice. Opening with a general introduction to pharmacology as a science, the book goes on to explain what is meant by drugs and medicines and why pharmacology should be of relevance to health care professionals. The reader is presented with general principles of pharmacology followed by systemic pharmacology that covers the actions of important groups of drugs in common use to treat diseases and conditions of the cardiovascular, respiratory, endocrine, musculoskeletal, skin and central nervous systems. The physiology and pathophysiology relevant to the understanding of how these drugs work is included. Finally the book explores the law in relation to the sale, supply, administration and prescription of drugs and explains what is meant by non-medical prescribing. All aspects of non-medical prescribing are considered including the use of exemptions to the Medicines Act, patient group directions, supplementary prescribing and the development of independent prescribing for nurses and pharmacists. Pharmacology is explained in simple, easy to understand terms and the book avoids any unnecessary chemistry where possible. Case studies that are of particular relevance to health care professionals are used throughout to illustrate the importance of the pharmacology major body systems and pathologies and the potential problems of adverse drug reactions and drug-drug interactions. Delivers the critical information primary care providers need to be thoroughly informed prescribers This unique resource—an evidence-based pharmacology text and reference for advanced practice students and clinicians—guides users in analyzing the pharmacological foundations of drug therapy and fosters the development of sound clinical judgment in determining the appropriate medication for every patient across the lifespan. Targeting the specific needs of APRN and PA students and clinicians, the text is a “bridge” between standard, lengthy pharmacology texts and quick pocket references that lack information regarding key pharmacotherapy principles. Featuring an applied therapeutic approach to major disorders and their pharmacologic treatment, the book examines how medications act on the body and visa versa, while teaching the rationale for using specific therapeutic agents or drug classes. Each chapter includes case studies that apply the concepts discussed, relevant diagnostic studies, applicable guidelines, genomics, and important lifespan considerations. Of special interest is a chapter on pharmacogenetics explaining the basic principles underlying our current understanding of genetic variations in response to pharmacotherapy and adverse drug reactions. Easily digestible chapters include objectives and review questions. Ancillary resources include an instructor manual with learning objectives, chapter summaries, and case studies; chapter PowerPoint slides; test bank; and image bank. Key Features: Delivers an applied, evidence-based foundation on the basic science underlying prescribing Targets the specific needs of APRN and PA students and professionals and related healthcare providers Provides clinical decision-making tools and principles to support sound prescribing judgment Focuses on synthesizing drugs to manage commonly occurring disorders Includes strategies for addressing the needs of specific populations throughout the lifespan Includes abundant case studies illuminating key concepts Includes a robust instructor manual with learning objectives, chapter summaries, and case studies; PowerPoint slides; test bank; and image bank. Purchase includes access to the eBook for use on most mobile devices or computers. Perfect for: Undergraduate Health science, Paramedic science, Nursing, Midwifery, Podiatry and Optometry students. *Pharmacology for Health Professionals 4th Edition* provides a comprehensive introduction to fundamental pharmacology principles and concepts.
